SUMMARY

Self-starter Software Engineering undergraduate with strong Computer Science fundamentals, REST API design proficiency, and Data Structures & Algorithms expertise (350+ LeetCode problems solved). Highly adept at building responsive full-stack applications using React.js, Node.js, Express, and MongoDB/SQL while leveraging AI-assisted development tools (Claude, Cursor) and prompt engineering to automate engineering workflows, accelerate sprint delivery, and write clean, maintainable code.

TECHNICAL SKILLS

Languages: C++, JavaScript (ES6+), SQL, HTML5, CSS3

Frontend Development: React.js, Next.js, Redux, Tailwind CSS, Responsive Web Design, State Management

Backend & Architecture: Node.js, Express.js, RESTful API Design, JWT Auth, Microservices, Socket.IO

Databases & Caching: MongoDB (NoSQL), MySQL (SQL), Redis Caching, Query Optimization

Developer Tools & Platforms: Git, GitHub, Postman, Vercel, Firebase, Claude, Cursor, Prompt Engineering, DSA, OOP

PROJECTS & ENGINEERING WORK

Project Pulse - Multi-Tenant Issue Tracking Platform *React.js, Node.js, Express.js, MongoDB, Redis, Socket.IO, JWT*

- Engineered a full-stack multi-tenant issue tracking platform serving 50+ active testers across isolated organization workspaces using modular REST APIs.
- Integrated **JWT authentication** and role-based access control to secure backend endpoints and manage user sessions.
- Leveraged AI-assisted tools (Claude and Cursor) with custom prompt engineering to automate repetitive backend boilerplate code, reducing feature implementation time by 40%.
- Implemented Redis caching for frequent database queries, optimizing backend performance and reducing API response latency by 35%.
- Architected real-time bi-directional communication using Socket.IO for instant status updates across active user sessions.

Safenet - AI Content Moderation System *React.js, Node.js, Express.js, REST APIs, Groq API*

- Built an AI-assisted content moderation engine capable of scanning text, image, and audio files for policy enforcement with real-time feedback.
- Utilized Claude and Cursor for code refactoring, system debugging, and automated test case generation, accelerating development speed by 50%.
- Integrated Groq API for rapid AI classification and built responsive React user interfaces with drag-and-drop uploads.
- Developed modular Express.js backend workflows for real-time moderation feedback and automated error handling.

Foodie Fiesta - Recipe Discovery Web Application *JavaScript, React.js, HTML5, CSS3, REST APIs*

- Developed a responsive consumer web application using JavaScript and React.js, integrating Spoonacular RESTful APIs.
- Implemented custom debounced search, client-side filtering, and caching to reduce redundant external API hits by 30%.
- Designed mobile-first responsive layouts using CSS Grid and Flexbox to deliver high-performance user experiences.

ACHIEVEMENTS & HACKATHONS

- Smart India Hackathon (SIH) 2025:** Qualified for the External Round among 200+ competing teams for rapid software prototyping and real-time problem-solving under pressure.
- Algorithmic Mastery:** Solved 350+ Data Structures & Algorithms problems on LeetCode using C++, demonstrating core CS competence.

EDUCATION

Galgotias College of Engineering and Technology

Sep 2023 – May 2027

B.Tech in Computer Science & Engineering (AI & ML) | CGPA: 7.7 | Greater Noida, U.P.

Panchsheel Balak Inter College

2020 – 2023

Class XII: 90.2% | Class X: 96.8% | Noida, U.P.
